

The Madison Isthmus Bike and Bite: A tour de Forage

Mulberry trees are often discouraged from growing in cities for many reasons, such as staining concrete and cars. But what if we ate more of them? This map is for those that are itching to dig their bikes out after a long Wisconsin winter, and may need some extra fuel along the way. Mulberry trees are easy to identify, and with this map, finding them should be easy too! To help identify them, there are some pictures to guide you to the right tree. And don't worry about the fruits that you can't reach, the birds will thank you for leaving some for them! The suggested route is 20 mi. Mulberry season in Wisconsin can vary from May to August depending on the tree.

- Public Tree
- Private, may overhang
- Private, encourages public use

Madison, WI
